Tarefa 4 - Cálculo 1 - 790753

$$1) \int x \cdot e^x \, dx \quad \text{tem-se que:} \quad u = x$$

$$\therefore du = dx$$

substituindo:

$$\int u \cdot dv = u \cdot v - \int v \cdot du$$

$$dv = e^x \, dx$$

$$\therefore v = e^x$$

$$= x \cdot e^x - \int e^x \, dx = x \cdot e^x - e^x = e^x (x - 1) + C$$
